

LÊ THỊ MỸ LINH

SENIOR QUALITY ENGINEER

linhle3798@gmail.com +84 868 382 137 Hanoi, Vietnam

PROFESSIONAL SUMMARY

Senior Quality Engineer with 4+ years of experience specializing in platform-level quality strategy, test infrastructure engineering, and multi-layered test automation. Proven track record in designing and implementing comprehensive testing frameworks across Component, Integration, UI/E2E, Performance, and Visual Regression layers within high-throughput financial systems. Combines a strong software development and DevOps foundation with applied AI capabilities to drive continuous quality improvement at scale.

PROFESSIONAL EXPERIENCE

Senior Quality Engineer | Techcombank Securities (TCBS) Apr 2021 – present

Owns quality engineering strategy, tooling, and team capability development for mission-critical securities trading and market data systems, operating under strict reliability and data-accuracy SLAs.

Led the formation and capability building of a QE team focused on performance engineering — defining team structure, establishing the performance test environment, and setting quality standards across services.

Architected and executed a multi-layered test strategy spanning Component, Integration, UI/E2E, Performance, and Visual Regression testing, aligned with system risk profiles and microservice architecture.

Designed and implemented performance testing suites using k6 and JMeter; modeled real-time market data streaming scenarios simulating peak traffic 3–5× actual load to validate SLA thresholds for the stock price board system.

Developed an AI-assisted performance test review skill that automatically analyzes k6/JMeter results to surface bottlenecks, anomalies, and SLA breaches, replacing manual log analysis with structured, actionable diagnostics.

Built a visual regression testing pipeline to automatically detect and surface UI drift between releases, reducing manual verification effort and improving regression detection coverage.

Integrated test automation suites into CI/CD pipelines and cloud-based environments, enabling continuous quality feedback within the SDLC.

Engineered a proprietary test management platform integrating with Zephyr Scale and Jira APIs to automate test case synchronization, execution tracking, and quality reporting — eliminating manual aggregation and cutting reporting effort by 70%.

Designed data-driven quality dashboards aggregating automation results and manual execution outcomes per service and release, enabling trend-based quality assessment over point-in-time pass/fail metrics.

Built an AI-powered MCP tool for test design assistance: encodes ISTQB-standard techniques (equivalence partitioning, boundary value analysis, decision tables, etc.) to guide QEs and developers in generating well-structured, coverage-complete test cases including edge cases and business-rule validation — reducing test design effort significantly.

Created an AI-powered DAB (system design document) review skill that identifies quality and risk signals in architecture documents — flagging missing error handling, scalability concerns, and testability gaps before implementation begins.

Java Developer | TP Bank Jun 2020 – Apr 2021

Backend developer on the eBank digital banking platform, contributing to feature delivery and cross-team collaboration.

Developed and maintained backend modules for digital banking services using Java and Spring Boot, adhering to banking-domain business rules and compliance requirements.

Collaborated closely with Business Analysts, QA Engineers, and platform teams to clarify requirements, resolve defects, and improve overall system quality.

Built foundational knowledge of software architecture, business logic flows, and system design patterns that directly informed a subsequent transition to Quality Engineering.

EDUCATION

B.Sc. Computer Science | Hanoi University of Industry 2016 – 2020

GPA: 3.6 / 4.0

Java Developer Program | FPT Fresher Academy 2019 – 2020

TECHNICAL SKILLS
